BISCOFF COMMUNITY

BIS

WHITE PAPER

A little dog. A community. A purpose.

A community meme coin inspired by Biscoff, with a mission to bring people together and support pet rescue through transparent, documented action.

RESCUE / COMMUNITY / TRANSPARENCY

VERSION 1.0 | OCTOBER 6, 2026

Founder review draft • Proposed policies clearly identified

A community with a purpose

Inspired by Biscoff. Built around compassion.

Executive summary

BIS is a community meme coin project inspired by Biscoff, a beloved dog, with a mission to bring people together through creativity, shared identity, and support for pet rescue. The project aims to turn community attention into practical awareness and, where funding is available, documented assistance for animals in need.

Our mission

Build a welcoming community that celebrates Biscoff while promoting responsible pet ownership, rescue awareness, and transparent support for animal welfare.

Our vision

A community where entertaining memes help introduce a lasting purpose: giving vulnerable animals a better chance at safety, care, and a loving home. Success should be measured through participation and evidence of support, alongside the quality of communication.

What BIS represents

BIS brings together three ideas: a recognizable dog mascot, a community people enjoy participating in, and a proposed rescue support program. Its identity is rooted in warmth, humor, and a commitment to explaining what has been done and what remains a goal.

Project status

The founder has described BIS as a Solana meme coin launched through Pump.fun and has supplied the mint address reproduced in this paper. This edition does not independently certify the token configuration, market data, listings, partnerships, or completed donations. Roadmap activities and operational policies below are proposals unless specifically documented as completed.

The token & transparency

Clear identity. Verifiable facts.

Token identity

Project / token name: Biscoff
Ticker: BIS
Network: Solana (founder supplied)
Launch platform: Pump.fun (founder supplied)
Mint address: 62ko9prPCoRFPYGpe7gTRop7fZGQspEn8YbJAYgdpump

Tokenomics disclosure

A complete tokenomics statement should describe supply, circulating supply, creator and affiliated holdings, liquidity arrangements, authorities, and any allocation or lockup. No percentages or supply figures are asserted in this edition because supporting on-chain records have not been verified.

Pending verification

Total and circulating supply; token program and decimals; mint and freeze authority status; creator and affiliated wallet addresses and balances; liquidity pool or bonding-curve status; any liquidity lock or burn evidence; allocations, vesting, and transfer restrictions; applicable platform fees and any token-specific transfer charges.

Creator holdings

Any BIS purchased by the creator should be disclosed as holdings, with the wallet address, amount, acquisition basis, and share of verified supply. A purchase cost alone does not establish an allocation percentage or prove that tokens are locked.

Participation & utility

The present concept centers on community participation, memes, rescue awareness, and voluntary support initiatives. No staking reward, yield, dividend, redemption, formal voting right, or claim to treasury assets is promised by this white paper. Any additional functionality requires separate technical specifications and disclosures.

Public disclosure standard

Before publication as a finalized token specification, the team should attach explorer links and dated evidence for each tokenomics field. Wallet disclosures should distinguish creator, operations, rescue funding, and liquidity addresses when applicable.

Pet rescue support

Turn goodwill into documented action.

Proposed rescue program

BIS aims to support legitimate shelters, animal rescue organizations, and specific welfare needs such as food, veterinary treatment, temporary care, and adoption awareness. The program is a planned initiative; this paper does not claim existing charitable partnerships or completed rescue payments.

Funding model

Potential funding may include voluntary contributions, founder contributions, and a portion of project revenue if such revenue becomes available and is formally designated for rescue support. No fixed donation percentage, minimum donation, or recurring payment commitment has been approved in this edition.

Buying BIS & donating

A token purchase is not automatically a donation. This paper does not describe an automatic rescue fee or smart-contract donation mechanism. Where the project later designates funds for rescue work, the funding source, amount, timing, and recipient should be disclosed separately.

Recipient selection

Proposed process: confirm the recipient identity and animal welfare activity; verify payment instructions through a trusted channel; evaluate the stated need; record the approval and amount; and publish evidence of payment with sensitive personal information removed.

Proof of support

Each rescue report should show the recipient name, purpose, date, amount and currency, payment reference or transaction hash, and available acknowledgment or receipt. Crypto transfers should distinguish the token amount from any estimated fiat value. Off-chain payments need receipts rather than an unsupported on-chain claim.

Impact reporting

Track funds contributed, funds spent, available balance, recipient confirmations, and support outcomes. Count animals helped only when the recipient provides a reasonable basis. Share stories with permission and distinguish an intended outcome from a verified result.

Roadmap & delivery

Milestones tied to evidence, not price.

Phase 1 | Establish the foundation

Consolidate official community channels and the BIS brand. Publish the verified mint address and tokenomics disclosures. Identify accountable project contacts, publish community rules, and document wallet security practices. Completion evidence: a public information page with consistent links and dated disclosures.

Phase 2 | Build an informed community

Create original Biscoff content, welcome new members, and explain the mission clearly. Hold community updates and respond to common token and rescue questions. Completion evidence: maintained channels, an update archive, and accessible reporting of impersonation or suspicious messages.

Phase 3 | Start documented rescue support

Approve the funding policy, identify suitable recipients, and complete an initial support activity when resources permit. Publish supporting records and a balance reconciliation. Completion evidence: a verified recipient, payment proof, and a first impact report.

Phase 4 | Improve visibility & access

Prepare accurate profiles for relevant token information services and assess exchange requirements. Submit applications where appropriate, while publishing only confirmed outcomes. Completion evidence: live profile links or official acceptance notices. An application is not an approval; an information profile is not an exchange listing.

Phase 5 | Sustain & strengthen

Review community feedback, refine operations, assess additional rescue collaborations, and improve reporting. Consider community events or merchandise only after publishing costs, fulfillment terms, and the rescue contribution policy. Completion evidence: recurring updates, reconciled financial reporting, and documented activities.

Timing & dependencies

These phases are proposed goals, not guaranteed deliveries. Progress depends on team capacity, available funds, recipient cooperation, technical review, and external platform decisions. No token price, market capitalization, trading volume, or listing deadline is promised.

Community & stewardship

Trust grows through consistent behavior.

Community culture

BIS should welcome questions and constructive feedback. Members are encouraged to share original memes, spread accurate rescue information, and help newcomers understand official resources. Respectful participation matters more than pressure to buy or hold.

Team accountability

The project should publish an accountable team contact, clearly identify official administrators, and disclose relevant creator or team token holdings. This paper does not establish a DAO or binding token-holder governance system. Community polls may inform decisions without creating enforceable control over funds.

Proposed treasury controls

Keep operational and rescue funding records separate. Publish designated wallet addresses where used. Record expenditures, approvals, and balances. Prefer multiple independent approvals for treasury payments when practical, and describe the actual custody arrangement before relying on it publicly.

Communication standard

Proposed cadence: a concise weekly progress update and a monthly rescue and funding report whenever funds are raised or spent. Report completed work, open decisions, upcoming milestones, and material changes. Announce commitments only when the team can explain how they will be funded.

Safety in the community

Administrators should not request seed phrases or private keys. Publish official links through a consistent verified source, limit administrator permissions, and remove impersonation or phishing content. A moderation bot is a protective measure, not a guarantee against fraud.

Channels to confirm

Founder-provided Telegram identity: @BIS_Community. The exact Telegram invite, X profile, website ownership, and all other official links should be confirmed before distribution. BISCommunity.com has been discussed as a proposed website name; this edition does not certify that a site is live or controlled by the project.

Risks & publication notes

An honest foundation for the long journey.

Market & liquidity risk

BIS is a speculative meme coin. Its price may fluctuate sharply, liquidity may be limited, and a participant may lose the entire amount spent. Community growth, rescue goals, or marketing activity do not guarantee market demand, returns, or the ability to sell.

Technical & custody risk

Wallet compromise, phishing, third-party platform failures, network interruptions, token authority settings, and concentration of holdings can affect participants. This paper makes no claim that the token is audited, immutable, authority-revoked, or protected by locked liquidity.

Delivery & funding risk

Roadmap activities and rescue support may be delayed, revised, or remain unfunded. External platforms decide their own listing and verification outcomes. No exchange approval, charitable registration, legal classification, or tax treatment is established by this document.

Scope of this paper

This document describes the founder-provided project identity and a proposed operating framework. It does not confer ownership in an entity, a right to revenue, a guaranteed return, or a contractual donation entitlement. Legal and technical claims require independent review and supporting evidence.

Before a final public release

Confirm on-chain token data and wallet disclosures; approve donation funding and custody policies; identify the accountable team or entity; verify official channel links; substantiate any listing or partnership claim; and replace pending fields with dated evidence. Publish revisions with a version number and a short change log.

Document record

Version 1.0 | October 6, 2026
Founder review draft. Project identity and mint address are based on information supplied by the founder. Proposed policies are recommendations for adoption, not claims about systems already operating. No live market statistics or unverified supply figures are included.

Our guiding idea

Build a community people enjoy. Support animals with care. Show the evidence behind every promise.
